USI Pursuit CoE | March 2025

Hi all,

We are excited to bring you the March edition for 'The intelligence update'.

The edition contains a special feature on the much awaited Adobe Firefly update (not too hard to guess 😉) along with the regular sections. .

Special feature | Industry updates | Gen AI in Pursuits | Upcoming events

SPECIAL FEATURE

Exciting update worth of a special feature!

Adobe has finally started to gradually roll out the much-awaited generative video features on Firefly and some of them are already available for us to start experimenting on.

The much-anticipated generative video features - **Text-to-Video** and **Image-to-video** features on Firefly is available on the web app and like any other Firefly output, are based on licensed datasets – making the generative output commercially safe to use. The tools, that work on simple text prompts, can generate a video clip of 5 seconds and provides variety of camera movements and can add life to the static imagery.

> One remarkable feature of Firefly's 'Text to Video' tool is its capability to provide various camera angles and movements with a single click. This allows users with minimal video editing experience to produce high-quality video content from just a single image frame. This presents an amazing opportunity for the Pursuit team to integrate this innovative tool into our pipeline, offering a cutting-edge solution to our stakeholders."
>
> — ***Bala***
> *(on his experiment with the feature)*

While the initial interface and output of the feature look promising, the catch here is the generative credits. Every license is allocated certain free generative credits – the quota that

is shared by both image and video generative output. Considering video generation consumes credits massively, we need to be mindful of how we are leveraging the same.

Another available update is the **Translate** feature – Translate video and audio (input format - .mp4, .mov, .mp3, .wav, .aac format up to 4K resolution, ranging from 5 second to 10 minutes with a minimum of 5 seconds of audio) allow the users to convert spoken content in a video/audio into more than 20 languages effortlessly, widening the audience base.

Other Firefly features for video/audio workflow enhancement to watch out for are: *Generative Extend (Premiere Pro), Enhance Speech* and *Text-to-Avatar.*

Please note: any Firefly feature/tool which is in beta version can't be used commercially and shall only be used for experimentation until it is updated by Adobe.

GEN AI IN PURSUITS

Custom cover image with various design styles using Firefly for an industrial sector client – *Tripti Gupta*

About Client

Phinia Inc. leads in industrial roadways with cutting-edge, sustainable solutions.

Cover image concept

Initially, the cover image was different, but after a thought from the engagement team member, we had to change the approach and provide a fresh cover design depicting a vehicle climbing a hill to symbolize progress and emphasize how Deloitte's value addition aids in navigating the path and advancing forward.

Design process

The turnaround time to create a new or updated cover image was a few hours, so I collaborated with Kashyap to generate options and provide a fresh perspective on the concept, resulting in several cover images within two hours. Out of the 10-12 options presented to the pursuit team, 6-8 were finalized, and the engagement team selected a realistic-looking AI-generated image, successfully completing the delivery just in time for the submission deadline.

Submit your Gen AI stories, use cases, prompts, and G-Marks on the GenAI Wins website and stand a chance to win something cool!

UPCOMING EVENTS

Put your ideas into motion with Adobe Firefly video

Adobe Firefly webinar for Creative Cloud users at Deloitte

March 13 | 2pm IST
